

// THE PROCESS

How does AnswerRank get you cited in AI search?

THE ANSWERRANK PROCESS

AnswerRank uses a four-phase process: Audit, Strategy, Execution, and Measurement. Every engagement starts by understanding exactly where you stand in AI search today, then builds and executes the plan that gets you found on Google and cited by ChatGPT, Perplexity, and Google AI Mode.

Most clients start with the free audit. From there, the path is clear.

Phase 01

What does the AEO Audit cover?

WHAT AN AEO AUDIT COVERS

The AEO Audit maps exactly what AI systems see when they read your content, and why they're choosing to cite your competitors instead of you. We review your pages against 12 AI citation criteria, identify your fastest opportunities, and benchmark you against whoever is already showing up in AI answers in your space.

The audit covers

- Content structure: how well your pages are formatted for AI extraction
- Direct answer formatting: whether your content gives AI systems extractable passages
- Schema markup: what structured data you have and what's missing
- E-E-A-T signals: the trust indicators AI systems look for in deciding who to cite
- Topical coverage: the gaps between what you cover and what AI systems are being asked
- Competitor benchmarking: who is getting cited in your space and exactly why

Phase 02

What does the AnswerRank content strategy include?

WHAT THE CONTENT STRATEGY INCLUDES

The strategy gives you a complete content roadmap that covers both Google rankings and AI citations in one plan. Not two separate plans stapled together, one integrated strategy where every piece of content is built to work across every surface your customers use to find answers.

- Complete keyword map: traditional SEO keywords and AI fan-out sub-queries
- Topic cluster architecture: how your content pieces connect and reinforce each other
- Publishing calendar: what to write, in what order, and exactly why
- Schema markup plan: which structured data goes on which pages
- Measurement framework: how to track Google rankings and AI citation rates at once

Phase 03

How does AnswerRank write content that gets cited by AI?

HOW ANSWERRANK WRITES FOR AI CITATION

Every piece of content we write is built to do two jobs at once: rank on Google and earn citations in AI answers. That means specific structural choices at every level of the content, not generic "quality content" advice.

- Question-based headings that match the sub-queries AI platforms generate in your topic area
- Direct answer openings: the first sentence of every section answers the heading question completely
- Cited statistics and original data, proven to increase AI citation probability by up to 40%
- FAQPage schema added to every article, the most reliable structured data signal for AI extraction
- Internal linking that builds topical authority across your content cluster
- Author and organisation schema, E-E-A-T signals that tell AI systems you're a trusted source

Phase 04

How does AnswerRank measure AI search performance?

HOW AI SEARCH PERFORMANCE IS MEASURED

You get a monthly report that shows you exactly where you're appearing and how your visibility is moving. No vanity metrics, no fluffy engagement numbers, just the data that tells you whether the strategy is working.

- Google rankings for every target keyword, week over week
- AI citation rates across ChatGPT, Perplexity, Google AI Mode, and Gemini
- AI referral traffic in your analytics, properly attributed, not lumped into Direct

- Share of model: how often your brand appears vs competitors for your key topics
- Monthly recommendations: what to optimise, update, or expand based on what we see

Ready to see where you stand? The free audit is the first step.
